Q.2 The monthly distribution of 9 Watt LED bulbs sold by two firms X and Y from January to June 2018 is shown in the pie-chart and the corresponding table. If the total number of LED bulbs sold by two firms during April-June 2018 is 50000, then the number of LED bulbs sold by the firm Y during April-June 2018 is ________.

LED bulbs sold
By

\[
Y_{April} = \frac{2}{5} \times 15 = 6\% 
\]

\[
Y_{May} = \frac{4}{5} \times 10 = 8\% 
\]

\[
Y_{June} = \frac{10}{20} \times 11 = 5.5\% 
\]

LED bulb sold by Y during April-June

\[
A + B + C = (6 + 8 + 5.5)\% = 19.5\%
\]

(a) 11250 (b) 9750 (c) 8250 (d) 8750

Ans. (*)
Total LED bulb sold by X and Y 35% this value = 50000
So, LED bulb sold by Y (April to June)

\[
\frac{50000}{35} \times 19.5 = 27857.142
\]

[As 35% of total = 5000

\[
\text{Total} = \frac{50000}{0.35} = 142857.142
\]

Y (April- June) = 19.5% of total \(0.195 \times 1442857.14 = 2785.142\]

No option is matching.

Mistake in paper was that examiner intended to give total as 50000 and the options were place accordingly as 19.5% of 50000 = 9750 which is (d).

But this will be wrong as total is NOT 50000 as per language. So correct answer is 27857.142.

Which matches with none of options.

**Q.29** The diameter and height of a right circular cylinder are 3 cm and 4 cm, respectively. The absolute error in each of these two measurements is 0.2 cm. The absolute error in the computed volume (in cm\(^3\), round off to three decimal places), is _______.

**Ans.** (5.18)

Let diameter, \( x = 3 \) and height = \( y = 4 \) and error = ± 0.2

\[ V = \pi \left( \frac{x}{2} \right)^2 y = \frac{\pi x^2 y}{4} \]

\[ \therefore \quad V = f(x, y) \]

So,

\[ dV = \left( \frac{\partial V}{\partial x} \right) dx + \left( \frac{\partial V}{\partial y} \right) dy \]

i.e.,

\[ dV = \left( \frac{1}{2} \pi xy \right) dx + \left( \frac{\pi x^2}{4} \right) dy \]

\[ = \frac{1}{2} \pi \times 3 \times 4 \times (0.2) + \frac{\pi \times (3)^2 \times (0.2)}{4} = 1.65\pi \]
\[ = 1.65 \times 3.14 = 5.18 \text{ (approx)} \]

i.e., absolute error = | 5.18 | = 5.18

\[
\text{pOH} = 14 - 5.6 = 8.4

**III**\textsuperscript{rd} Step : Use principle of virtual work to find unknown horizontal force \( H_S \)

\[ \delta U = 0 \]

Considering 2 : 1 (vertical to horizontal) method of load distribution and $\gamma_w = 10 \text{kN/m}^3$, the primary consolidation settlement (in mm, round off to two decimal places) of the clay stratum is _________.
